

## Hardware Collection

### About Us

Howdens Joinery offers a range of hardware products designed to complement our range of joinery doors and meet the needs of both the modern home and commercial environments.

We are a trade only business that has been selling to trade professionals since 1995. Given the complexity of the modern home, we believe that only experienced, qualified builders and joiners should install our products.

### Our Product Range

Door furniture, security products and fixings are ranges where it is important to have the widest possible choice, and Howdens has all the options you need to complete your projects.

Everything we supply is designed and manufactured to the highest standards. All our hardware products, where appropriate, meet British Standards, building regulations and insurance requirements for both domestic and commercial applications.

From essentials such as hinges and screws to finishing touches such as door stops and draught excluders, we have fixings for every job. Like our hardware, they meet the necessary standards and requirements, and the range covers products for both commercial and domestic applications.

We also supply a complete range of sealants and adhesives, as well as a range of tools and other hardware accessories such as shelving and tubing.

To find out more, contact your local builder or visit [www.howdens.com/hardware-collection](http://www.howdens.com/hardware-collection)

## Handle Families

---

Howdens offers a range of handle families in a variety of finishes. The handles within the families include a selection of lock, latch, privacy, bathroom and rose handles, all available with matching door furniture and accessories.

## Hardware Finishes

---

Doors are an essential, highly visible aspect of any property, and can be transformed through different hardware and finishes so they offer great opportunity to express your taste.

Internal and external, domestic and commercial, the Howdens range includes a variety of design possibilities and finishes from stainless steel, chrome, satin nickel, brass, pewter, aluminium and antique black to suit modern and traditional settings.

Just as importantly, matching locks and security fittings are available to complete the look.

To see our complete range of handle finishes, refer to page 107 for our hardware overview.

# Standards & Accreditations

Howdens Joinery supplies high quality hardware to trade customers from stock. When professionally installed, these products will provide many years of reliable use.

## UK Manufactured

Howdens Joinery is a British business. We pride ourselves on the sense of local community, traditional values and long established relationships that thrive in our depots and manufacturing facilities.

This logo  or  indicates that the products illustrated are manufactured and assembled in the UK.

## British Standards

In all instances it is good practice to fit British Standard Approved locks to all of your external doors. In many cases this is an insurance company requirement and may reduce your premium. Approved locks carry the British Standard Kite Mark and are approved to BS 3621 or BS EN1303, rigorous test standards to which the locks must perform.

### BS 3621

A well established product standard for thief resistant locks in the UK. Locks tested to BS 3621 must exceed a minimum level of performance and be subjected to a general vulnerability assessment to enable the product to be Kite Marked by BSI.

### BS EN1303: 2005

The product standard for thief resistant cylinders for locks in the UK. Locks tested to BS EN1303 must pass various performance and vulnerability assessments to enable the product to be Kite Marked by BSI.

### BS EN1154

The required standard to test to, in order to attain CE marking for controlled door closing devices.

### EN1125: 2008

Applies to panic applications where the exit door is used by the public and provides safe and effective escape through the doorway, with minimum effort and without prior knowledge of operation.

### EN179: 2008

Applies to emergency applications where the exit door is used by people who 'are familiar with the emergency exit and its hardware, and therefore a panic situation is unlikely to occur'.

## Guild of Architectural Ironmongers (GAI)

Howdens Joinery are affiliate members of the Guild of Architectural Ironmongers (GAI) ensuring the highest professional standards are achieved and ongoing commitment to quality assurance.

## Essential Fire Door Hardware (FH)

Howdens essential fire door hardware is tested to perform against fire regulations and legislation, and has test evidence to support this for presentation to a fire officer. These items of hardware are classed as essential, to ensure that the fire resisting door stays closed in its frame in a fire emergency, and include items such as door closers, hinges and latches. Other items which do not alter the integrity or performance of the door would be classed as non-essential and do not require test evidence (see **FH** below).

## Non-Essential Fire Door Hardware (FH)

Howdens hardware includes a range of product suitable for use on fire doors, which does not require test evidence to support this for presentation to a fire officer. These items are classed as non-essential, and consist of face fixed products that do not affect the integrity of the fire door, and in no way impede or reduce the door's ability to withstand fire attack for the specified time. These products include items such as fingerplates, kickplates and signage. Although these items do not require test evidence like essential fire door hardware, careful selection is still needed, as often holes are drilled through timber fire doors or large metal components are attached, which can invalidate a fire door test certificate.

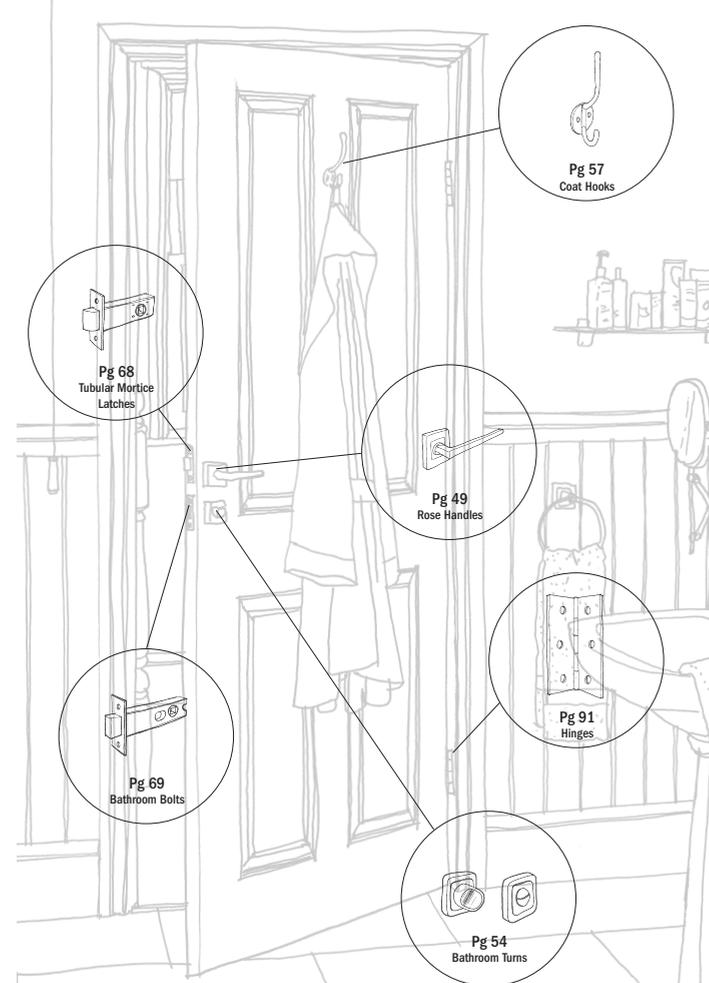

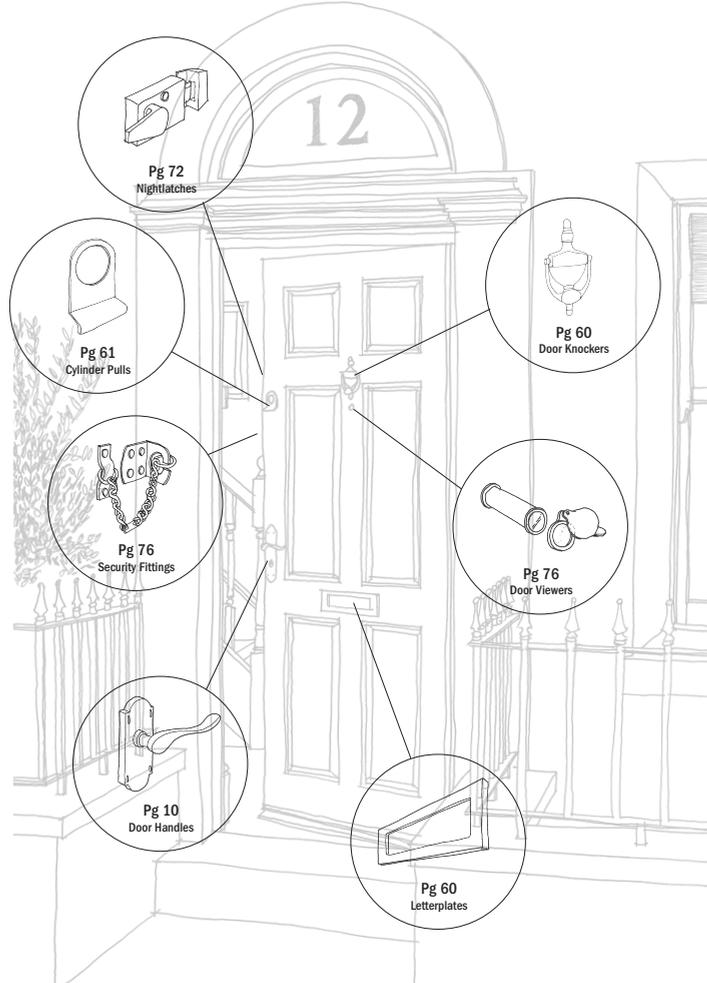

## Secured by Design

Secured by Design (SBD) is a police initiative to guide and encourage those engaged within the specification, design and build of new homes to adopt crime prevention measures. Secured by Design focuses on reducing crime in homes and commercial premises and promotes the use of security standards to ensure products help to achieve this. The objective is to reduce burglary and crime in the UK by designing out crime through physical security and processes. Where a product is shown with the Secured by Design logo you have the reassurance that the product has been tested to the highest relevant standard for security.

# The Hardware Collection

Howdens Joinery offers a wide selection of hardware products to help create the perfect combination for any domestic or commercial location.

## Door Handles

Carefully chosen door furniture can transform the look of a door - but of course it is essential that one complements the other. That is why we offer products to suit all architectural styles, from historically accurate reproductions to contemporary designs, in a wide choice of materials and finishes: stainless steel, chrome, satin nickel, brass, pewter, aluminium and antique black.

Our range includes levers, mortice knobs, knob sets and pull handles, along with co-ordinated letter and door plates, escutcheons and cylinder pulls.

## Choosing the Right Type of Handle

### Latch Handles

Are for internal use and usually mounted on a backplate. They are used in conjunction with a tubular mortice latch. Suitable for use with doors that are of 35-44mm thickness.

### Lock Handles

Have a keyhole cut for use where a lock is required and are used in conjunction with mortice sashlocks. Suitable for use with doors that are of 35-54mm thickness.

### Privacy Handles

Are used on bathroom doors and in conjunction with a tubular mortice latch. On the inside of the door there is a thumbturn and on the outside of the door there is a release slot which can be used to unlock the door in an emergency. Suitable for use with doors that are of 35-44mm thickness.

### Bathroom Handles

Are used in conjunction with a bathroom mortice sashlock. In order to comply with building regulations, bathroom locks in commercial applications must have the ability to be operated externally in case of emergency. Suitable for use with doors that are of 35-44mm thickness.

### Rose Handles

An alternative to a latch handle, rose handles are mounted on a small round or square backplate. Rose handles can be fitted on their own with a tubular mortice latch or with a matching bathroom turn or escutcheon. Suitable for use with doors that are 35-54mm thickness.

### Mortice Knob Handles

Mortice knobs are mounted on a round backplate and usually fitted in conjunction with a tubular mortice latch. These can also be paired with a bathroom turn or escutcheon. Suitable for use with doors that are 35-44mm thickness.

### Euro/Oval Profile Handles

Are used mainly in commercial settings. They have an enlarged euro or oval profile keyhole shape cut out of the backplate which is used to house a key operated cylinder. They are used in conjunction with a cylinder lock.

### Disabled Access Handle

Are used on bathroom doors. On the inside of the door there is a lever and on the outside of the door there is a release slot which can be used to unlock the door in an emergency. Suitable for use with doors that are of 40-54mm thickness.

## Draught Excluders

Draught proofing is one of the most inexpensive and effective energy efficiency measures for any size of building - yet it is often overlooked. A 5mm gap, commonly found under a domestic door, can let through 80m<sup>3</sup> of cold air per hour.

We offer a wide selection of Draught Excluders suitable for both commercial and residential properties.

## Door Security

Howdens supplies a variety of options for making homes and commercial properties secure. These include a range of locks and deadlocks, nightlatches, security bolts, door chains and viewers, all complying with insurance guidelines and British Standards as necessary. Whatever your insurance company recommends we can supply the right product.

## Choosing the Right Type of Latch/Lock

### Tubular Mortice Latches

A tubular mortice latch can be used in conjunction with either latch, rose or knob handles.

### Bathroom Locks

Bathroom locks are based on a 3 lever lock case, with a deadbolt operated by a bathroom turn instead of a key.

### Sashlocks

Sashlocks have a deadbolt, latch and a key, and can be operated from both sides of the door. Sashlocks are suitable for use with lock handles or a rose handle/mortice knob and an escutcheon.

### Deadlocks

Deadlocks have a deadbolt and a key only, and can be operated from both sides of the door. Deadlocks are often used in conjunction with a nightlatch, to increase security.

### Traditional Nightlatches

Are mounted on the surface of the door and are a simple method of opening external doors, where key access is not required on the inside. Ideal for use on entrance doors in multi-residential dwellings.

### Double Locking Nightlatches

Automatically deadlock when the door is closed. The inside handle can be deadlocked by a turn of the key from the inside, making them ideal for glass panelled doors.

### Digital Door Locks

Digital door locks offer a convenient method for allowing access to authorised-only users.

### Cylinder Locks

Are thumbturn operated and ideal for locations that require controlled access from one direction and easy access from the other or as a double cylinder which operates with a key on both sides.

### Rebate Kits

Use when fitting either a mortice sashlock or deadlock to a pair of doors with rebated meeting stiles (i.e. the doors overlap when closed).

### Rim Locks

A basic deadbolt used for locking sheds, outhouses and similar applications.

## Door Security

### Tubular Mortice Latches

Tubular mortice latches can be used in conjunction with either latch, rose or knob handles.

# Deadlocks

Deadlocks have a deadbolt and a key only, and can be operated from both sides of the door. Deadlocks are often used in conjunction with a nightlatch, to increase security.

## 3 Lever Locks

3 lever locks are a basic type of mortice lock. The locks have 100 key patterns - at least 100 different key patterns must be made before any key pattern can be used again.

## Commercial Door Furniture

Howdens supplies a range of commercial door furniture suitable for communal buildings, offices and commercial properties. The products available include a variety of handles, fingerplates, door closers, digital door lock, panic hardware and signage.

The Edinburgh and Aluminium Roundbar handles also come with a 10 year operational warranty.

# Fire Rated Hardware

All the specialist fire rated hardware we offer has been tested to meet all relevant fire regulations. Please always remember to consult a qualified building inspector for exact fire door accessory requirements.

## Door Closers

A legal requirement when fitting any fire door, door closers ensure the door is closed and latched when not in use to prevent fire from spreading. All our over head door closers come with a 10 year manufacturer's guarantee. It is important to use the correct door closer and to assist with this, you can find a simple guide to help you choose the right product on page 85.

## Fire Door Hinges

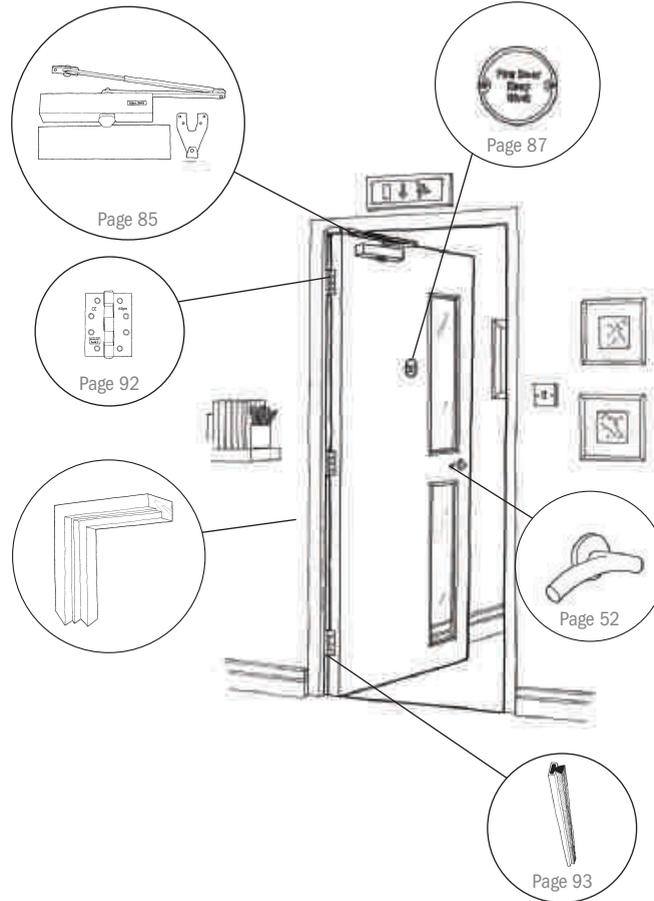

Essential in ensuring the integrity of the fire door is not compromised during an emergency, all our graded hinges are fire rated. Our wide range of graded hinges suit every application, from heavy commercial to light domestic use. It is recommended a minimum of 3 hinges are used when installing a fire door, with the grade of hinge dictated by the weight of the fire door being fitted. See page 90 for a simple hinge grade calculator.

## Fire Rated Door Frames

A comprehensive range of fire rated door frames are available to view in The Joinery Collection Brochure.

## Fire Rated Expanding Foam

Quick-setting, fire rated expanding foam expands on application to fill small holes or gaps. Once set, it can provide up to 4 hours fire resistance in linear joints and help to control the spread of fire. GIRO088 Everbuild Hand Held B1 Fire Rated Expanding Foam 750ml can be found on page 101.

## Signage

Crucial in directing users to fire exits in the event of an emergency, signage ensures awareness of safety procedures at all times. Find our comprehensive range of commercial signage on page 87.

## Fire Rated Handles

Fire rated handles have a higher melting point to ensure the integrity of the handle is not compromised in the event of a fire. Our selection of fire rated handles are suitable for commercial and residential properties, and all are fire rated for up to 60 minutes and suitable for use with all our fire doors. Find our full range from page 52, including our most popular fire rated handle, DFU0729 Lago Polished Stainless Steel Rose Handle.

## Fire Rated Latches

Help to prevent the spread of fire by ensuring the door remains closed in its frame in the event of a fire. We offer 2 ½" and 3" Premium Tubular Mortice Latches, both fire rated for up to 60 minutes (See page 68).

## Intumescent Door Seals & Hinge Pads

Our intumescent products react to heat in the event of a fire and seal the door to help prevent the spread of smoke. ITS0030 4" Intumescent Hinge Pads can be found on page 93 and a full range of door seals are available in The Joinery Collection Brochure.

## Handles & Accessories

# Door Closers

Door closers are an important link in the control of fire and smoke and their usage can help save lives. In order to help us recommend the best door closer for your needs, please make sure you know your door width, height, location, usage, fire door requirements and whether it's push or pull mounted before enquiring.

## EN Classification explained

BS EN1154 is the required standard to test to, in order to attain CE marking for controlled door closing devices.

### Light Duty

Domestic, light commercial

### Medium Duty

Offices, apartment blocks

### Heavy Duty

Open plan, offices, public buildings, department stores

## Door Closer Weight Calculator

When a door closer or ironmongery is added to a door this has a disproportionate effect on the calculated door weight. It is essential this calculated weight is taken into account when choosing hinges and door closers, and NOT the original door weight alone. To calculate your corrected door weight please follow the below guide:

$$\begin{array}{r} \text{Actual Door Weight (kg)} \\ *35 \end{array} + \begin{array}{r} \text{Add from Weight Corrections (kg)} \\ 15.75 \end{array} = \begin{array}{r} \text{Corrected Door Weight (kg)} \\ 50.75 \end{array}$$

### Weight Corrections

Add 20% for fitting a door closer and ironmongery or add 75% if the door closer requires a backcheck function.

Add 15% for heavy use doors (i.e corridors in public buildings).

Reduce by 10% for light use doors (i.e internal office doors)

\*Example - 35kg fire door fitted with DCL0007 Door Closer in a busy public corridor: 30% added for closer (10.5kg) + 15% added for heavy use (5.25kg) = Corrected weight is 50.75kg

## Fixings & Fittings

Howdens has fixings for every job, including hinges, shelving and brackets, catches, worktop accessories and screws. Our range covers both commercial and domestic settings.

# Choosing the Right Type of Hinge

## Butt Hinges

Butt hinges are basic general purpose hinges, mainly used for hanging standard doors in low use, domestic applications.

## Graded Hinges

All our graded hinges are fire rated. Suitable for commercial applications, typically used on fire doors and heavier standard doors.

## Self Closing Hinges

Self closing hinges are suitable for commercial applications on standard or fire doors up to 40kg where controlled door closing is not required.

## Flush Hinges

Flush hinges can be used for hanging lightweight internal and cupboard doors.

## Parliament Hinges

Parliament hinges are used to hang double doors between two rooms where doors need to hinge 180° past the lining/casing.

## Piano Hinges

Piano hinges are used internally, traditionally for cabinet work.

## Tee Hinges

Tee hinges can be used internally and externally to hang standard doors, shed doors and gates. The hinge leaf should be 1/3 - 1/2 of the width of the door or gate.

## Hooks and Bands

Hook and bands are used to hang large gates and garage doors.

## Hinge Grade Information

Graded hinges have different specifications dependent on the grade that is achieved in testing. It is important to understand the differences in specification when selecting the hinge to ensure it is compatible with the door and other hardware being fitted; ensuring the door does not sag and operates smoothly. Please see the table and other guidance information below to select the correct hinge grade for the door mass:

Grade	Door Mass (kg)
7	40
11	80
13	120

Door closers increase the loading on hinges and the rate at which they wear. Door closers without a backcheck increase the door mass by 20%<sup>\*1</sup> while door closers with a backcheck increase the door mass by 75%<sup>\*2</sup>. Hinges should be selected according to the total mass; actual door mass plus the mass added by the door closer. It is recommended that three hinges are used on timber doors when fitting with a door closer.

All graded hinges are CE marked.

<sup>\*1</sup> Add 20% to the mass of the actual door. <sup>\*2</sup> Add 75% to the mass of the actual door.

## The Joinery Collection

Howdens Joinery has over 100 door styles to choose from including internal, external, sliding wardrobe, French and garage doors. Using our existing range of internal door styles, you can also create storage solutions for a variety of different uses around the home including wardrobes, pantries and cloakrooms.

We also offer quality joinery products from stair parts to skirting and timber or laminate flooring - plus the tools, fixings and accessories you need to install them.

We offer a wide choice of joinery products for all kinds of renovation, refurbishment and new build projects. We have designed our range specifically to meet the diverse demands of today's homes, commercial properties and public spaces.

# Internal Doors

There are many factors to consider when choosing an internal door. How it looks is obviously essential; the material it is made from, the style of panelling, whether it is glazed and in what way. You will also want to think about how easy it is to maintain, and how well it will stand up to the test of time. And of course, you will want to make sure it fits within your budget.

In the Howdens Joinery range, there is sure to be an internal door that meets all your requirements exactly. We offer a range of moulded, stile & rail, softwood, hardwood, flush and sliding wardrobe doors. Our choice of internal doors is designed for both traditional and contemporary interiors. Glazed doors are another option, with all glass toughened to BS 6206, BS EN12600 or BS EN12150. Fire resistant doors are also available.

4 Panel Grained Bi-Fold

4 Panel Grained

Burford 4 Panel 2 Light Glazed

Dordogne Oak

Dordogne Smooth Glazed

Linear Oak

6 Panel Clear Pine

Genoa Oak

Solid Rustic Oak Ledged

Shaker Panel & Mirror Door White

Primed 4 Panel Shaker Glazed

Ash Veneer 16G Glazed

## External Doors

A great deal is expected of an external door. It has to create a good first impression when you enter a property, and with Howdens you can do this in contemporary style or with a historically accurate design. You may also want to let in natural daylight – if so, we have a variety of pre-glazed doors. You can decorate our doors however you want: we make them ready for all kinds of paint and stain finishes.

We also offer doors in a range of materials. Each involves different types of maintenance, and they are all designed to withstand the elements.

Security is another issue: your door must resist impact, and should have the right hardware to keep unwanted visitors out. You will also want effective insulation, to block drafts and prevent heat escaping. Again, Howdens has all the products you need.

Cottage M&T Triple Glazed

Richmond M&T Glazed

Stable Oak M&T Triple Glazed

EKT Hemlock

Hemlock 310 EGTP2P

Ply G/O Glazed

H2XG M&T Glazed

## Joinery & Flooring

We offer a wide range of joinery products to help professional fitters get the best results in domestic and commercial interiors. If you are building or repairing a staircase, we have stair parts in a choice of styles. For a final touch that adds or preserves character, there is a great variety of redwood, oak and MDF mouldings which can be finished to your individual style. We also supply solid, real wood and laminate flooring, giving you different options for all types of room, all guaranteed to perform.
