JOINERY CO.

MAKING SPACE MORE VALUABLE

The Joinery Collection

Joinery Collection

About Us

Howdens Joinery offers a range of joinery products and kitchens specifically designed for today's homes. We are a trade only business that has been selling to trade professionals since 1995. Given the complexity of the modern kitchen we believe that only experienced, qualified builders and joiners should install our products.

Our Product Range

We have over 100 door styles to choose from including internal, sliding wardrobe, external, French and garage doors. We also offer quality joinery products, from hardware and stair parts to skirting and timber or laminate flooring - plus the tools, fixings and accessories you need to put them together.

There is an enormous choice of joinery products for all kinds of renovation, refurbishment and new build projects. We've designed our range specifically to meet the diverse demands of today's homes, commercial properties and public spaces. So whether it's a contemporary apartment or a traditional country cottage, a city office or a village school, Howdens can help you see the project through.

Howdens App

Bring a door or kitchen to life by downloading the Howdens App. Hold your smartphone or tablet over the images marked with the 📺 icon in this brochure and, using the latest picture recognition technology, the App will start to play the associated door or kitchen movie. When the movie starts to play, double-tap the screen to make it full-size.

Door Visualiser

The Door Visualiser on the Howdens website is designed to help you choose the perfect door for your home. The Visualiser allows you to upload a photo of your current internal or external door, select one of our range of doors and place it over your existing door to visualise how it will look in your home.

You can then select from a variety of paint colours and finishes, and get more detailed product information such as available sizes. Once you have chosen your new door, you can save the final image so that you are able to email or print it.

You can find the Door Visualiser at www.howdens.com/advice-inspiration/door-visualiser

To find out more, contact your local builder or visit www.howdens.com

The Burford Joinery Collection

Following the popularity of our range of Burford kitchens, we offer a collection of doors, joinery and hardware that is specifically designed to match your Burford kitchen.

The Burford collection of internal doors is exclusive to Howdens and includes 4 panel moulded, single panel oak, and 4 panel oak doors. Glazed doors are available in 4 panel oak, moulded and single panel oak.

Howdens' Burford doors were awarded the John Hedgecock Memorial Award in 2011. This award was first introduced in 2010 as a tribute to the British Woodworking Federation's former technical manager and one of the leading authorities on woodworking and joinery manufacture who died in 2009. The award is given to individuals, companies, projects or products which demonstrate exceptional technical excellence, achievement or innovation in joinery manufacture.

Designed to match your Burford door is an exclusive range of contemporary and traditional Burford skirting and architrave, available in primed and oak veneered finishes.

You can complete the look with hardware that has been chosen to match your Burford kitchen handles.

Personality & Style Through Colour Choice

Your choice of door says a lot about your personality and individual style. Doors are an essential, highly visible aspect of any property, so they offer a great opportunity to express your taste.

Internal and external; domestic and commercial; hardwood, softwood and moulded - the Howdens range includes all design possibilities from modern and minimal to traditional and decorative.

Make your door truly unique through your choice of paint, lacquer or stain. Colour and finish can transform the look and feel of a door. Gloss, satin or matt; contemporary or traditional colours; or natural shades. There are many options to make your door individual to you.

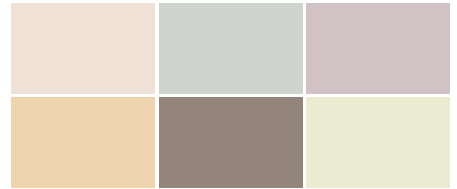

To make the decision easier, here are some examples of how different colour palettes look on various door styles.

Traditional

Darker tones of gloss red, blue and green are an established choice for exterior doors on older properties. Traditional decorative interiors lend themselves to more muted cream and beige interior doors.

Natural

Doors painted or stained in natural shades work beautifully as part of a co-ordinated design scheme. This may be in a rustic cottage, modern family house or chic loft apartment. Muted tones, such as beiges and browns, suit many styles of property.

Contemporary

Bold, fresh and often unusual colours characterise contemporary design. A room may be mainly white, with an 'accent' wall in a rich, striking shade. Doors can be painted in the same way to create contrast.

Heritage

There has been a great revival of this colour palette in recent years. Some shades are unexpectedly strong, but when used in the right combinations, they can make a home look and feel authentic.

Howdens & the History of Doors

Over the centuries, the way doors are made has developed quite gradually, and many classic designs are still reflected in the Howdens range today.

The door's role of insulating between a building and the outside world – or between rooms has given it great significance in the history of architecture. Front doors in particular have always been seen to deserve high quality workmanship and attention to detail.

In the Beginning

From medieval times to the late 17th Century, doors of all types were usually made from vertical timber planks. These planked doors were held together by horizontal ledges, visible on the less important side, or on higher quality doors concealed by a second layer of planks.

The 18th Century

Planked doors are still used today, particularly for cottage style properties but by the early 18th Century, the panelled door had become more popular. Its design was influenced by an interest in classical forms of architecture, and featured many different combinations of mouldings. Heavy bolection mouldings were often found on important doors within a household – and you can still find this type of craftsmanship in Howdens' current range.

The 19th Century

The 6 panel design had become quite standard during the Georgian period and is still very relevant today but the 19th Century saw greater variation. Diamond and circular panels started to appear, and mouldings became increasingly elaborate. The 4 panel door was also introduced at this time, and the distinctive Victorian innovation was glazed panels, often with cut, stained or acid-etched glass.

The 20th Century & Beyond

By the 1930s, a modern functional look was becoming fashionable, and many people started facing their panelled doors with hardboard to create a flush door. This practice continued into the 50s and 60s, by which time purpose-made flush doors were widely available. These are still an important part of the Howdens range, because of their affordability and versatile, contemporary appearance.

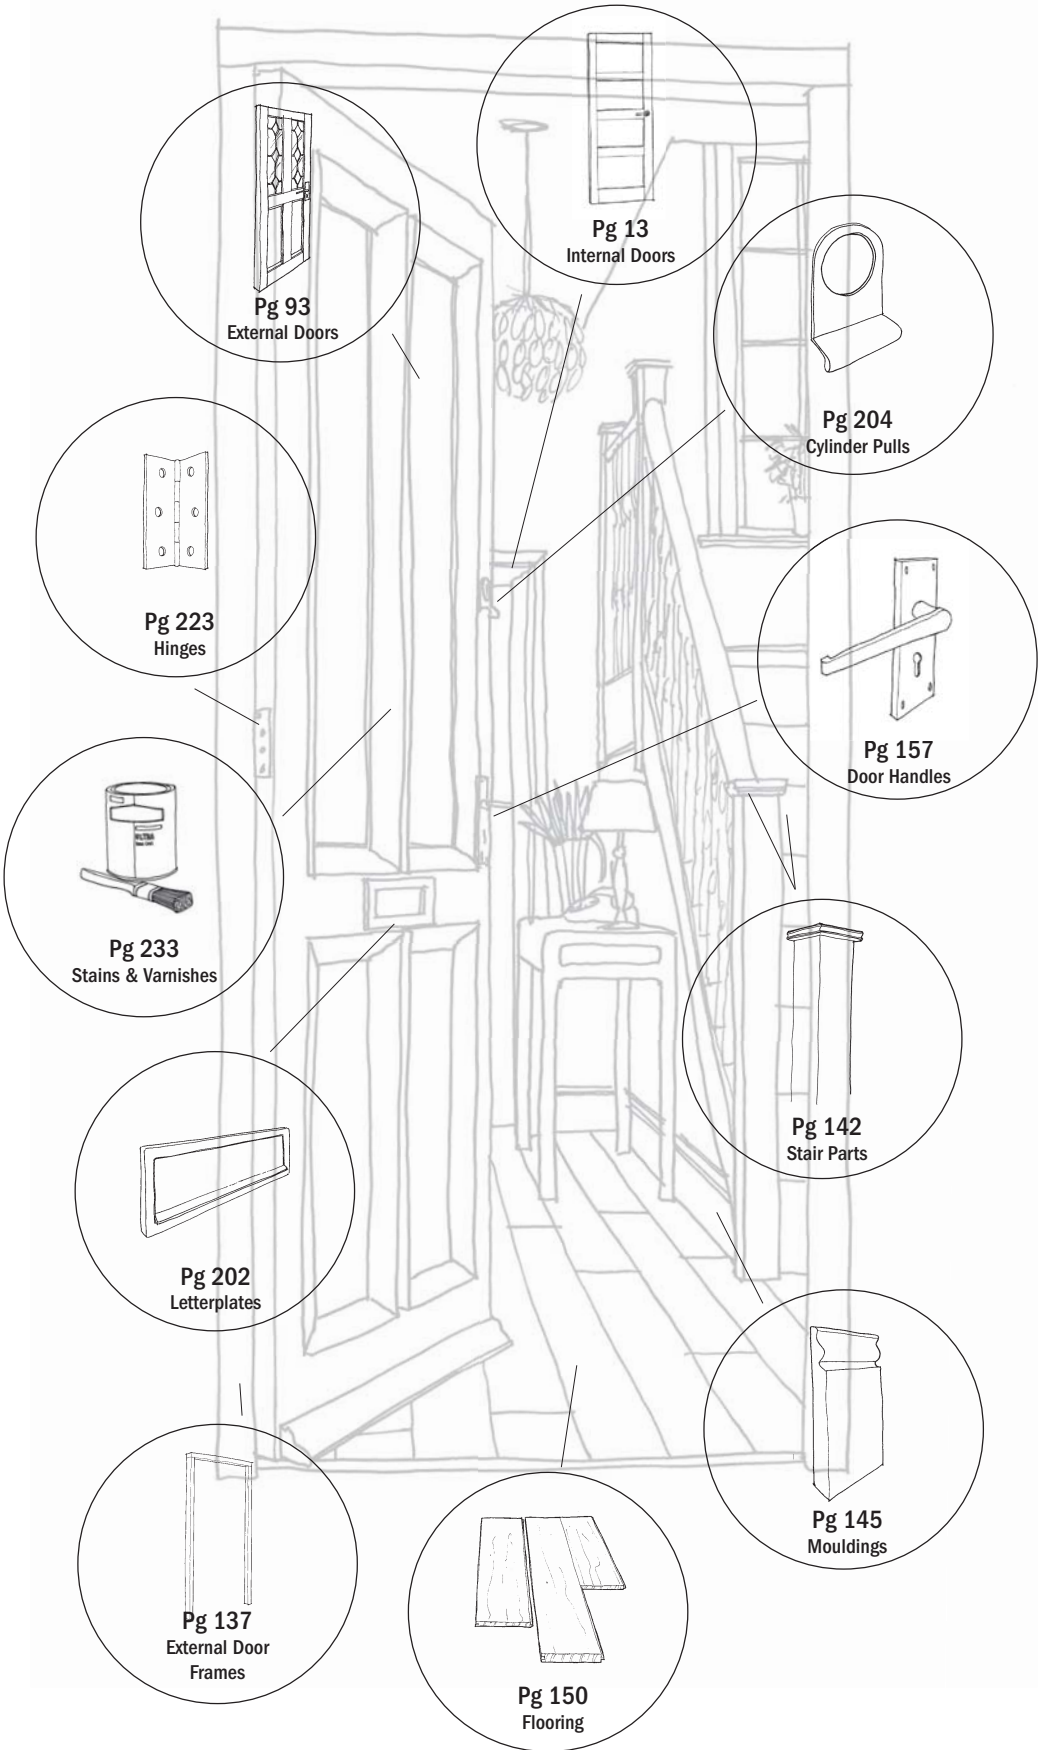

Of course, flush doors don't suit every architectural style. More recent developments have focused on creating doors which combine the look of a traditional panelled timber door with the affordability of a flush door. The result is today's moulded door. We offer a wide range of them in this brochure, alongside our stile and rail, softwood, hardwood and flush doors.

Thanks to this long history, Howdens now offer a wealth of door designs.

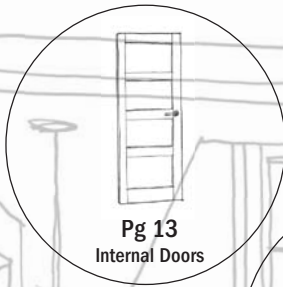

We are constantly developing new products to keep pace with changing tastes and meet ever more demanding building regulations.

A Truly Local Business

Howdens Joinery is the UK's leading trade supplier of kitchens, joinery and appliances, employing over 6,600 people and supplying over 300,000 small builders with over 350,000 complete kitchens every year.

Despite its scale, Howdens remains a local business with traditional values. The painting of the Howden village is an analogy for how our business works. There are over 570 Howdens Joinery depots, and in each one of them, the business is an integral part of the local community. Our customers are local trade professionals, who need trusted suppliers to support their businesses. We support them with high quality products, local customer accounts, immediate availability of products, and CAD planning services.

To learn more about the relationships that make Howdens Joinery a part of local life all around Great Britain, visit www.howdens.com/about-us/a-truly-local-business/

Howdens 5-0 team, winners of the 2013 Northampton Dragon Boat race

Claire Cook from Howdens Consett depot

James Hayes (left) and Joshua Blythman (right)

Adrian Knight and wife Yani

Colin Smith

Players of the Manchester United Supporters Football Club

Howdens 5-0 team

In Northampton, where Howdens National Distribution Centre (NDC) is based, an annual summer event attracts more than 1,000 people. Throughout the day, 39 teams compete in The Rotary Club of Northampton Dragon Boat Festival, in a race over 250 yards. Howdens entered five teams, and through individual sponsorship and donations, raised a total of £4,000 for the Warwickshire and Northamptonshire Air Ambulance, with the overall winners in 2013 being 'Howdens 5-0' from the NDC warehouse.

Claire Cook from Howdens' Consett depot

One of Howdens more energetic employees is Claire Cook, of the Consett depot in County Durham. Claire signed up for the Great North Run to raise money for Leonard Cheshire Disability, a national charity supporting disabled people. When the charity asked for volunteers to take on its Tri Together London triathlon, her manager, Julie Bywater, put Claire forward. She rose to the challenge, swimming, cycling, and running the final stage into Crystal Palace stadium – which she described as “total euphoria”.

James Hayes and Joshua Blythman

Howdens has been involved for many years with the Construction Industry Training Board (CITB), the national organisation for construction training in the UK. In particular, the Howden Joinery Bursary funds the first year's wages for apprentice joiners, enabling them to work in companies that couldn't otherwise afford to take them on. Through the bursary, Hordean Carpentry & Building Services, in Waterlooville, Hampshire, has recently taken on Joshua Blythman, as well as James Hayes who is now an apprentice carpenter with DM Habens Ltd (the Builders) of Hampshire.

Adrian Knight and wife Yani

Around the country, a huge variety of dedicated services offer support to people with different kinds of additional needs. One example is Little Miracles, a support group in Peterborough for children with additional needs or disabilities. Adrian Knight, who works in IT for Howdens, was keen to help: his wife Yani is involved with the centre, and they have a disabled son who attends sessions there. He arranged for the Howdens Peterborough North depot to donate a new kitchen, complete with appliances, fixtures and fittings, forming part of an amazing transformation to the existing structure.

Colin Smith

At the Phoenix Youth Centre in Daventry, over 170 young people take part in a wide range of activities and receive help with problems relating to drugs, alcohol and relationships. The centre also runs food awareness and cookery courses. Until recently, very poor facilities made this difficult. But a new kitchen – with cabinets, worktops and appliances donated by Howdens, and installed by Vice President and Chairman, Colin Smith – has improved the classes dramatically.

Players of the Manchester United Supporters Football Club

In Doncaster, there's a football team with a very unusual name: the Manchester United Supporters Club! It's been competing for more than 20 years and Gaz Davies, an account holder at Howdens in Worksop, is a committed member of the squad. The depot has made donations to help buy new kit – and, to say thank you, the team made sure the t-shirts featured the Howdens Joinery logo. Assistant Manager Karl Stoneham is planning another donation in 2014, helping the club to continue its success on the field.

How to get the best out of your door

A guide to the regulations which apply to selected products

Our range of joinery products has been carefully selected, offering a comprehensive choice of quality products at unbeatable prices.

Although the information below has been written specifically for the handling, installation and decorating of internal and external doors, the general principles of handling apply to all joinery products and cabinetry.

Our range of doors, joinery and flooring use real timber and veneers. Wood is a naturally grown material, meaning it is subject to variance in colour and grain.

Storage & Handling

Once purchased, all doors should be handled and stored in accordance with the BS Code of Practice CP151. Doors should never be stored in an area which is subjected to extremes in temperature. The building should be well ventilated and not recently plastered. Care should be taken in a centrally heated or air-conditioned building where moisture content could build up. When stacking doors, they should be kept flat, on at least three load bearers in order to distribute weight and prevent damage.

Installation

Doors should be fitted as prescribed in the BS Code of Practice CP151. It is essential that doors, both internal and external, are fully sealed and any air gaps plugged immediately after delivery.

Doors should be sealed and primed on both faces and all four leading edges. Refer to pages 15, 16, 94 and 95 for full finishing instructions.

Any surface that has been cut should be sealed prior to hanging (e.g. drilled, cut for letterboxes, hinges, locks, etc.). This is particularly important when the end grain is exposed. If the door has been preservative treated, any newly exposed wood must be re-treated.

When trimming a door to size it is important that equal amounts are removed from both edges. Please refer to individual door fitting instructions for further information.

Decoration

Decoration should be carried out in accordance with the BS Code of Practice BS 6150:2006. Products should be clean and dry. The instructions of the paint or stain manufacturer must be adhered to. Please refer to page 233 for stains and varnishes.

Failure to carry out the recommended instructions for decoration and sealing can seriously affect the performance of the door. With a little care and by using good quality decorative products, Howdens doors will serve well for years to come.

The glass is covered in a protective film which can be removed after the finishing process.

Paint & Peel

Care & Maintenance

Regular maintenance of Howdens doors should be made in accordance with the stain/paint manufacturer's instructions, to prevent breakdown of the wood finish and to protect the timber from deterioration. Dusting the door (without polish) and cleaning any dirty marks with a damp cloth (not wet) will be enough to keep the door looking fresh in the interim period. Harsh chemicals or abrasive substances should not be used to clean the door.

This information is offered as general advice regarding the Building Regulations. We recommend that specific details are obtained from Building Regulation documents as required.

These regulatory specifications are correct at the time of going to press, and are subject to fitting in accordance with relevant guidelines. Due to the nature of the raw materials used, doors may vary slightly in colour. External hardwood doors are engineered with a laminate hardwood core. Internal engineered oak doors have a chipboard core for the stiles and rails, with an MDF or chipboard core for the panels.

All doors are supplied excluding door furniture.

Regulations

The following is a guide to the regulations that apply to selected joinery products. Door ranges that include products conforming to these regulations will be marked with the relevant icon.

Fire Doors (FD)

Howdens doors are tested to BS 476: Part 22: 1987 achieving fire resistance up to 30 minutes (FD30) or 60 minutes (FD60) when hung and installed in accordance with the instructions provided with the door. All are third party certified and where applicable marked accordingly.

Essential Fire Door Hardware (FH)

Howdens essential fire door hardware is tested to perform against fire regulations and legislation, and has test evidence to support this for presentation to a fire officer. These items of hardware are classed as essential, to ensure that the fire resisting door stays closed in its frame in a fire emergency, and include items such as door closers, hinges and latches. Other items which do not alter the integrity or performance of the door would be classed as non-essential and do not require test evidence (see FH below).

Non-essential Fire Door Hardware (FH)

Howdens hardware includes a range of product suitable for use on fire doors, which does not require test evidence to support this for presentation to a fire officer. These items of hardware are classed as non-essential, and consist of face fixed products that do not affect the integrity of the fire door, and in no way impede or reduce the door's ability to withstand fire attack for the specified time. These products include items such as fingerplates, kickplates and signage. Although these items do not require test evidence like essential fire door hardware, careful selection is still needed, as often holes are drilled through timber fire doors or large metal components are attached, which can invalidate a fire door test certificate.

Part E Doors (E) - Sound Reducing

Doors which conform to Building Regulation Part E help to minimise sound travel, providing a peaceful and quiet environment (Scottish Section 5).

Part L Doors (L) - Warmth & Insulation suitable for New Build

Doors carrying Building Regulation Part L have a greater thermal efficiency and help to keep rooms warm and cosy. Suitable for most new build and extension projects. A 'U' value of 2.00 w/m² k or better is achieved by these products, when fitted with an approved frame in accordance with instructions.

Part L Doors (L) - Warmth & Insulation suitable for Refurbishment Projects

Doors carrying Building Regulation Part L have a greater thermal efficiency and help to keep rooms warm and cosy. Suitable for most refurbishment projects where both door and frame are being replaced.

A 'U' value of 1.80 w/m² k or better is achieved by these products, when fitted with an approved frame in accordance with instructions.

Please refer to the Scottish Building Regulations - Standard 6.1 for Scottish 'U' Value equivalents.

Part M Doors (M) - Mobility and Access

For access and facilities for disabled people, wider doors and reduced threshold heights are required by Building Regulation Part M (selected sizes only).

Standards & Accreditations

Howdens Joinery supplies high quality doors, joinery & hardware to trade customers from stock. When professionally installed, these products will provide many years of reliable use.

Our Commitment – We work closely with our suppliers to ensure that the items we purchase come from sustainable renewable resources and are produced in a socially responsible way. Howdens Joinery has successfully achieved the Forest Stewardship Council® (FSC®) and the Programme for the Endorsement of Forest Certification™ (PEFC™) Chain of Custody certificates, which apply to a number of products as indicated in this brochure by the FSC® logo or **F** and the PEFC™ logo or **P**.

The Chain of Custody certification means there is an unbroken and documented chain of ownership all the way from the forest, via the mill, the importer, the manufacturer and the supplier to the end user. Our full environmental policy is available on request.

Forest Stewardship Council® (F) – The Forest Stewardship Council® (FSC®) is an international network designed to promote responsible management of the world's forests.

Programme for the Endorsement of Forest Certification™ (P) – The Programme for the Endorsement of Forest Certification™ (PEFC™) is a framework for the recognition of forest certification schemes meeting internationally recognised requirements for sustainable forest management.

UK Manufactured (UK) – Howdens Joinery is a British business. We pride ourselves on the sense of local community, traditional values and long established relationships that thrive in our depots and manufacturing facilities. This logo **UK** or **UK** indicates that the products illustrated are manufactured and assembled in the UK.

British Standards (BS) – In all instances it is good practice to fit British Standard Approved locks to all of your external doors. In many cases this is an insurance company requirement and may reduce your premium. Approved locks carry the British Standard Kite Mark and are approved to either BS 3621 or BS EN1303, rigorous test standards to which the locks must perform.

BS 3621 – A well established product standard for thief resistant locks in the UK. Locks tested to BS 3621 must exceed a minimum level of performance and be subjected to a general vulnerability assessment to enable the product to be Kite Marked by BSI.

BS EN1303:2005 – The product standard for thief resistant cylinders for locks in the UK. Locks tested to BS EN1303 must pass various performance and vulnerability assessments to enable the product to be Kite Marked by BSI.

BS EN1154 – The required standard to test to, in order to attain CE marking for controlled door closing devices.

EN1125: 2008 – Applies to panic applications where the exit door is used by the public and provides safe and effective escape through the doorway, with minimum effort and without prior knowledge of operation.

EN179: 2008 – Applies to emergency applications where the exit door is used by people who 'are familiar with the emergency exit and its hardware, and therefore a panic situation is unlikely to occur.'

Secured By Design (SBD) – Secured by Design is a police initiative to guide and encourage those engaged within the specification, design and build of new homes to adopt crime prevention measures. Secured by Design focuses on reducing crime in homes and commercial premises and promotes the use of security standards to ensure products help to achieve this. The objective is to reduce burglary and crime in the UK by designing out crime through physical security and processes. Where a product is shown with the Secured by Design logo you have the reassurance that the product has been tested to the highest relevant standard for security.

Guild of Architectural Ironmongers (GAI) – Howdens Joinery are affiliate members of the Guild of Architectural Ironmongers (GAI) ensuring the highest professional standards are achieved and ongoing commitment to quality assurance.

Arched Top Grained 6 Light Glazed

Internal Doors

An illustrated technical guide

There are many factors to consider when choosing an internal door. How it looks is obviously essential; the material it is made from; the style of panelling; whether it's glazed, and the type of glazing. You'll also want to think about how easy it is to maintain, and how well it will stand up to the test of time. And of course, you'll want to make sure it fits within your budget.

In the Howdens range, there is sure to be an internal door that meets all your requirements exactly.

Internal Door Thicknesses

All internal doors conform to the following thicknesses:

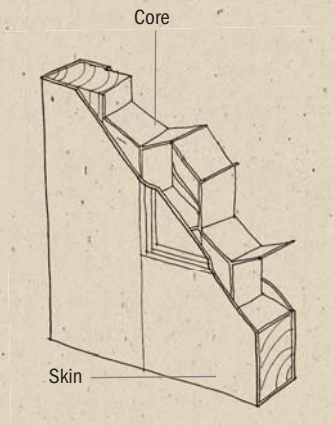

- Imperial sizes 35mm
- Metric sizes 40mm
- Fire Doors 44mm (excluding 35mm fire doors)

Moulded Panel Doors

We offer a variety of panel configurations, designed for traditional or contemporary interiors, with either smooth or textured surfaces. There is also a choice of core specifications, including standard, Developer Door and FD30 (fire resistant for up to 30 minutes). Glazed doors are another option, with all glass toughened to BS 6206, BS EN 12600 or BS EN 12150.

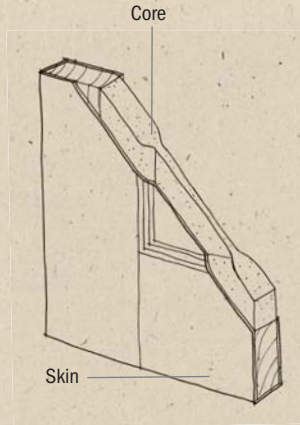

These doors are made from hardwearing, one-piece moulded facings, bonded to a timber frame and painted with a white base coat. Bi-fold versions are ideal for small areas and wardrobes, and we also offer mobility sizes.

Within the 6 Panel Grained door range we have every door size and style available.

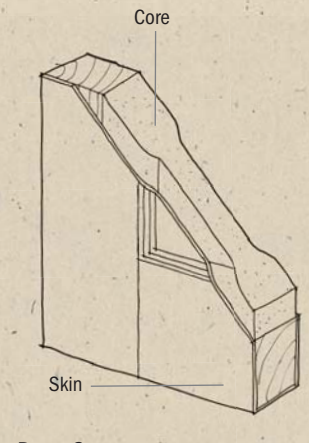

Standard Core

A multi-cell core for light duty, non fire-rated applications. Suitable for domestic use. Actual core construction may vary.

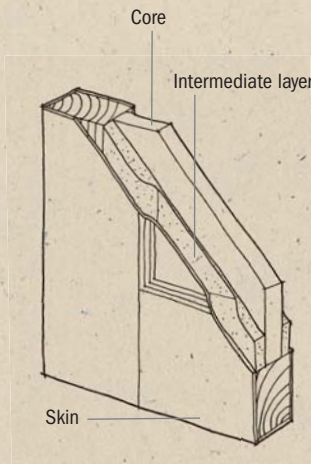

Developer Door Core

The solid core of the Developer Door provides additional strength and stability to the product. It may also reduce noise transmission and the risk of fire spread through the property. Please note this is not a tested fire-rated door.

Fire Door Core

The FD30 core is a high density core material. This proven construction, when correctly installed with a suitable lining, casing and intumescent strip, will provide certified fire resistance. Actual core construction may vary.

35mm Fire Door Core

Constructed with a high density non-reactive core, the 35mm thick certified 30 minute fire door can be used to upgrade an existing opening to a fire door, without the need to replace the lining or frame*. Intumescent strips can be fitted directly to the door so it can be used with an existing frame.

*See detailed product instructions, subject to material type and dimensions.

Softwood Doors

This range features a wide choice of glazed and panelled designs, and the 4 Panel Clear Pine is available as a fire door. You can also specify mobility sizes – and if space is an issue, there are neat bi-fold options.

Glazed doors are supplied with all glass toughened to BS 6206, BS EN 12600 or BS EN 12150.

Clear pine doors are manufactured with an engineered construction using selected veneers and lippings. The benefits of an engineered door are unique. This scientific way of controlling warp, shrink and twist present you with a superior door.

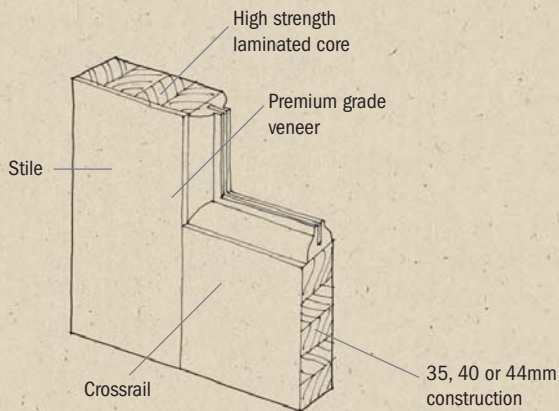

Doors are engineered using a solid internal core of laminated timber lengths. This gives a uniform stile and crossrail construction that ensures maximum strength and stability. The exposed surface is covered with premium grade veneer which guarantees performance and attractive appearance.

Knotty pine, redwood and hemlock doors are of a solid construction.

Finishing Information

Our softwood doors are ready for finishing with varnish, stain or paint. Please refer to page 233 for full range of Sadolin finishing products.

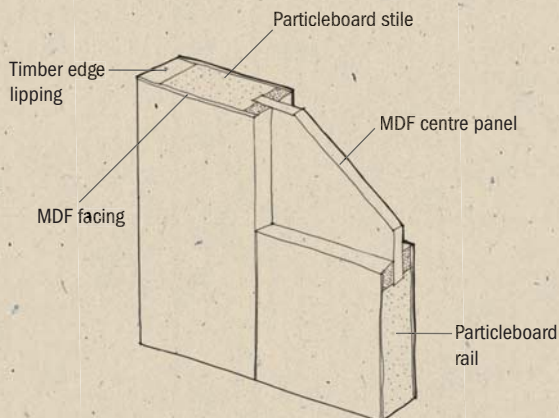

The Engineered Construction:

Internal Stile & Rail Doors

Offering standard and glazed designs, these doors are constructed using particleboard stiles and rails with MDF facings and doweled joints.

Glazed doors are supplied with all glass toughened to BS 6206, BS EN 12600 or BS EN 12150.

Finishing Information

Stile & Rail doors are supplied primed, ready for finishing with paint.

Hardwood Doors

High quality, engineered construction characterises this range. Our engineered oak doors have veneered particleboard with either MDF or particleboard core panels, and there are fire door versions of the 4 Panel Oak, Worcester Oak, Genoa Oak and Dordogne Oak designs. We offer a varied choice of glazed and panelled designs, as well as mobility sizes and bi-fold doors which are ideal for small spaces and wardrobes.

Within the Dordogne Oak door range we have every door size and style available.

Glazed doors are supplied with all glass toughened to BS 6206, BS EN 12600 or BS EN 12150.

Advantages of an engineered construction for hardwood doors include:

1. Superior colour matching within each door

It is far easier to colour match veneers than it is to do so on solid timber components.

2. Environmentally friendly

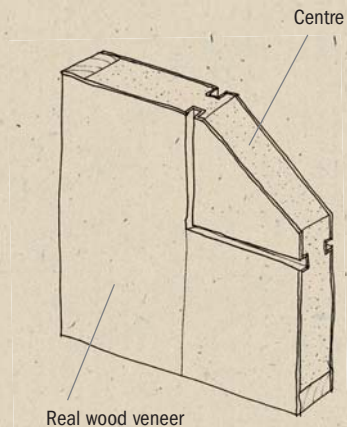

The timber used to make 1 solid door would produce enough veneers to make at least 10 engineered doors.

Our solid oak doors are of a tongue and groove construction with glued and nailed ledges.

Finishing Information

Our hardwood doors are ready for finishing with varnish or stain. Waxes, polishes and oils should not be used on our hardwood doors as they do not seal the door properly and may cause veneer delamination. Please refer to page 233 for full range of Sadolin finishing products.

Our Solid Rustic Oak Ledged door can be finished with varnish, stain, oil or wax.

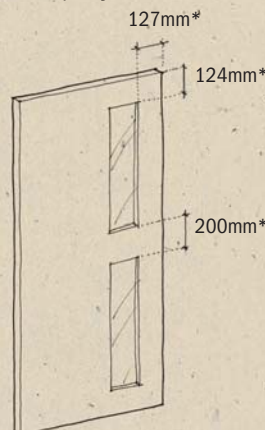

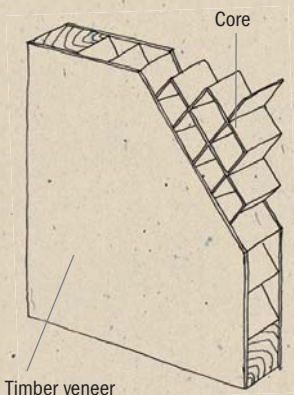

Flush Doors

We supply these cost-effective, modern doors in a range of finishes, including timber veneers and wood grain effect foils. They're ideal for both commercial and contemporary domestic interiors, and our range includes mobility sizes.

You have the choice of lightweight standard cores and fire-rated options, with or without window apertures. Our apertured fire doors are supplied fully glazed and include a number of options designed to meet the effective visibility requirements for Part M Mobility Doors. See regulation guidelines on page 10.

Where required, the External Solid Core Blank Lightweight door can be used internally. This plywood faced fire door is extremely versatile and can be customised to create something unique. If required, an approved fire door installer can cut the door to size, make apertures (custom glazing) in accordance with specific guidelines, and add veneers or other finishes (subject to instructions).

*Aperture dimensions after lining is applied and before the beading is fitted.

Internal Moulded Panel Doors

6 Panel Grained

Our most popular door is the six panel grained design. This door will suit a wide variety of interiors and is available in an extensive range of sizes.

- Constructed using softwood timber stiles and rails frame
- Suitable for paint finishing
- Fire Door and Developer Door options available
- 35mm thick, 30 minute fire protection option available

Sliding Wardrobe Doors

Our sliding wardrobe doors are available in white and oak finishes in both Shaker and mirror styles.

The Shaker style is a versatile door that suits a variety of interiors and can be combined with the Shaker mirror door. The classic mirror door is a simple design that is ideal for creating a feeling of space in a room.

Add bespoke internal storage solutions to your wardrobe using our standard product, including chrome hanging rail, wicker baskets, chrome baskets, wine racks, and internal storage drawers.

All doors are supplied with a steel frame construction. Shaker panel doors are constructed using 8mm paper faced chipboard, and mirror doors are supplied with 4mm annealed glass that is impact tested.

Sliding wardrobe doors are available in 610mm or 914mm widths and are only to be used with Howdens Sliding Wardrobe Door Track, available in 4 lengths that can be cut to size.

Mirror Door White Edge

This classic mirrored wardrobe door is ideal in many different interiors and creates a feeling of space in a room.

- Mirrored door supplied with 4mm annealed glass - impact tested
- Door supplied with a steel frame construction
- Doors only to be used with Howdens Sliding Wardrobe Door Track
- Tracks are available in 4 lengths (1200mm, 1800mm, 2700mm and 3600mm)

External Doors

An illustrated technical guide

A great deal is expected of an external door. It has to create a good first impression when you enter a property, and with Howdens you can do this in contemporary style or with a historically accurate design. You may also want to let in natural daylight – if so, we have a variety of pre-glazed doors. You can decorate our doors however you want: we make them ready for all kinds of paint and stain finishes.

We also offer doors in a range of materials. Each involves different types of maintenance, and they are all designed to withstand the elements.

Security is another issue: your door must resist impact, and should have the right hardware to keep unwanted visitors out. You will also want effective insulation, to block draughts and prevent heat escaping. Again, Howdens has all the products you need.

External Door: Thicknesses

All external doors conform to the following thicknesses:

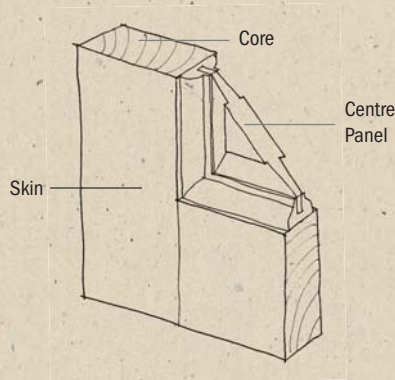

- Standard 44mm
- FD30 44mm
- FD60 54mm

Hardwood Doors

All our external hardwood doors are of an engineered construction, with a hardwood veneer to increase stability.

Our external hardwood doors are constructed using either variants of the Mortice and Tenon joints, dowell joints or slab construction.

Engineered Construction

Oak doors, a popular alternative to red hardwood, are also part of this range. Their construction features an engineered core and real oak veneer.

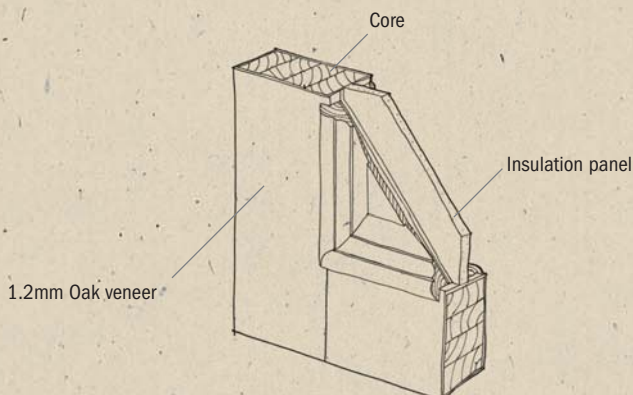

We offer oak and hardwood doors with triple glazing, where a decorative centre layer (which can be clear, obscure or bevelled and with zinc leading) is protected by two outer layers of 4mm toughened glass. This sealed weatherproof unit increases the thermal value of the window, and makes the design easy to clean.

Finishing Information

Our hardwood doors are ready for finishing with varnish or stain. Waxes, polishes and oils should not be used on our hardwood doors as they do not seal the door properly and may cause veneer delamination. Please refer to page 233 for full range of Sadolin finishing products.

Part L External Doors

Part L doors are constructed with an internal insulation panel to provide improved thermal efficiency. When fitted with an approved frame, our Part L doors achieve a 'U' value of 1.8w/m²k or better. Please refer to pages 113 and 126 for our full range of part L doors.

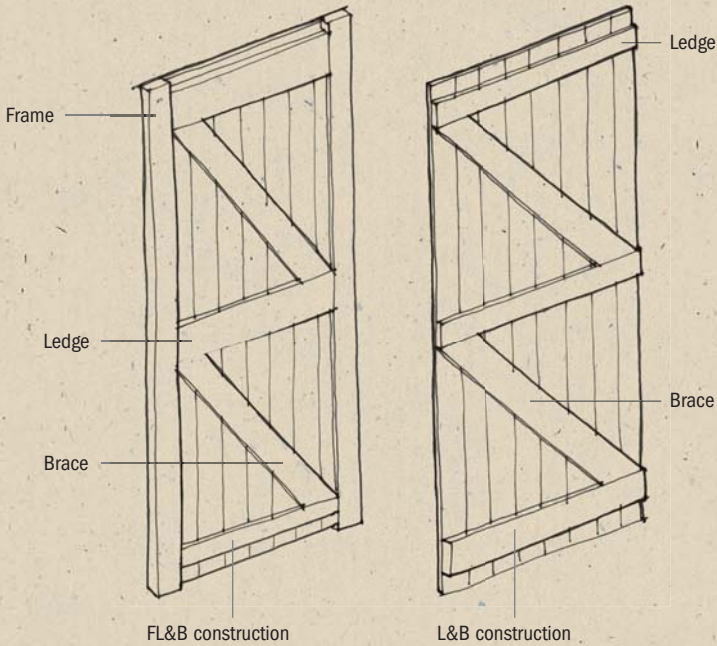

Softwood Doors

These products are suitable for a range of applications. They are treated to protect against fungal decay and rot, and supplied ready for finishing on site to your particular specification. Our redwood doors use Group 1 European timber.

FL&B and L&B doors have loose pinned ledges and braces which can be moved and pinned to the opposite side of the door. This gives flexibility when choosing which way round the door is hung.

Finishing Information

All our softwood doors are suitable for a paint finish only.

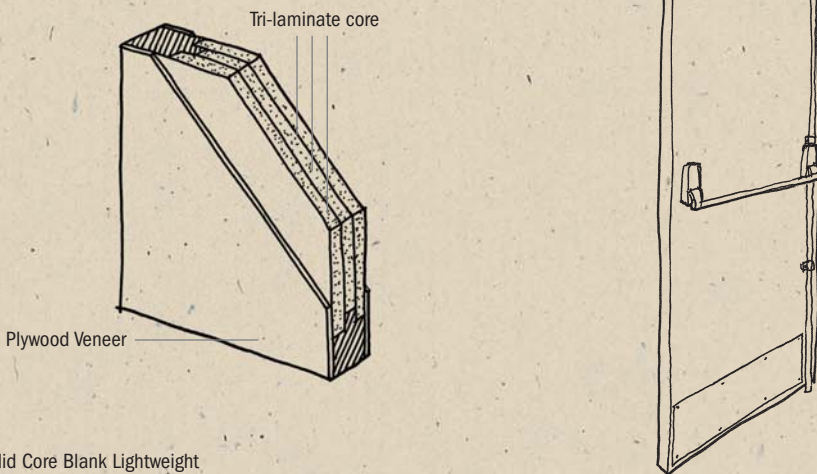

Flush Doors

Versatile and practical, our external flush doors come in a range of options. You can choose between solid doors and versions with glazed window apertures, and we offer FD30 and FD60 models, fire resistant for up to 30 and 60 minutes respectively.

The External Solid Core Blank Lightweight door is constructed using three layers of laminate core. This means it can be cut to suit different shape openings, cut to size, apertures can be made in accordance with guidelines, and veneers or other finishes can be added.

Finishing Information

All our external flush doors are suitable for a paint finish only.

Solid Core Blank Lightweight

Double & French Doors

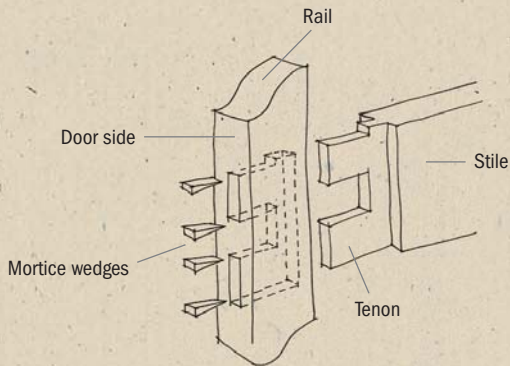

Many situations can benefit from double or French doors, and Howdens offer a good choice of styles. Softwood doors are available with a solid timber Stub Mortice and Tenon construction, and are treated to protect against fungal decay and rot. Bottom panels in the softwood doors are engineered construction. Hardwood doors are also available within this range with an engineered Mortice and Tenon construction.

All double and French doors are rebated for right hand opening.

Finishing Information

All our softwood double and French doors are suitable for a paint finish only. Hardwood double and French doors are suitable for finishing with varnish or stain.

M&T Construction

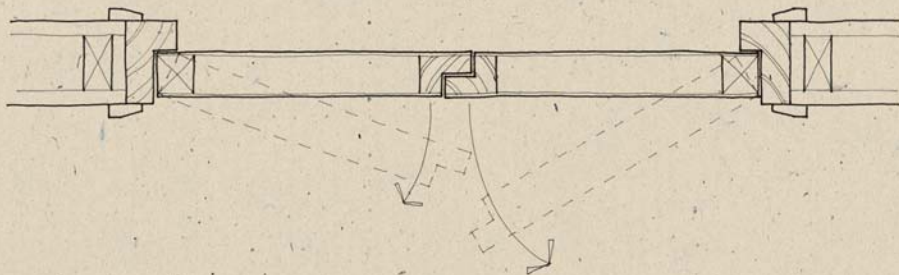

Garage Doors

Our redwood garage doors are made from Group 1 European timber, and are rebated for right hand opening as this illustration shows.

Finishing Information

All our garage doors are suitable for a paint finish only.

Welcome visitors into your home with the perfect front door...

Your choice of door says a lot about your personality and individual style. Doors are an essential, highly visible aspect of any property, and they offer a great opportunity to express your taste and ideas.

The front door needs to create a good first impression. Howdens can help you to achieve this through our wide variety of door designs. All of the doors can be decorated using various stain or paint finishes and many are also supplied pre-glazed.

...and complement it with the right hardware.

The door itself is only part of the story. By selecting the right hardware to blend in with the architectural style of a property or perhaps creating a new theme to complement it, you can bring a door and entranceway to life.

The door furniture you choose can transform the look of the door. It is essential that both the door and the furniture complement each other.

So from handles and knobs to locks and latches, we offer products to suit all architectural styles, from historically accurate reproductions to contemporary designs, in brass, chrome, solid pewter, satin nickel, stainless steel, aluminium and antique black.

Please refer to page 153 onwards for our complete hardware collection.

Joinery & Flooring

An illustrated technical guide

We offer a wide range of joinery products to help professional fitters get the best results in domestic and commercial interiors. If you are building or repairing a staircase, we have stair parts in a choice of styles. For a final touch that adds or preserves character, there is a great variety of redwood, oak and MDF mouldings which can be finished to your individual style. We also supply solid, real wood and laminate flooring, giving you different options for all types of room and all guaranteed to perform.

Door Frames, Linings & Casings

We have a range of door frames, linings and casings to suit your requirement. Door frames are available in either softwood or hardwood and either with or without a sill. The range also includes double door frames, garage door frames and a door frame length that can be cut to size.

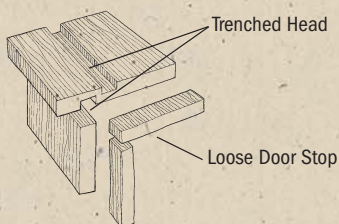

Our range of linings includes oak veneered and CLS options. We also have lining lengths that can be cut to size to create an internal door lining to allow for a door pair or other non-standard sizes.

A door lining has a loose door stop which can be fitted once the lining is installed.

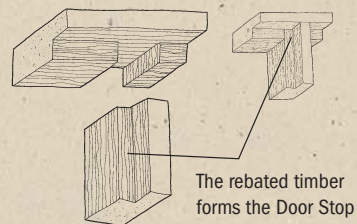

A trenched door lining has pre-machined grooves in the head in order to slot in the jambs (sides). On a trenched door lining, the head is reversible to accommodate two different sizes which is possible as the door stop is added once the lining is installed.

On the door casing, the door jambs and heads are already rebated to create the door stop.

We have both trenched and un-trenched door casings available. In order to easily slot in the jambs, door casings are trenched. Trenched casings are not reversible.

Door Lining

Door Casing

Intumescent & Acoustic Products

Intumescent Strips

Available in two types: intumescent only and intumescent with smoke seal, in both brown and white. The 10mm and 15mm intumescent strips are 30 minute rated, the 20mm versions are 60 minute rated. All intumescent strips have Certifire approval CF543, passed at BS 476 part 22 and 31.1, and have NHBC approval. All timber fire doors must be fire stopped with intumescent strip. The key benefits of passive fire protection are:

- Prevent the spread of fire, smoke and hot gases through a building by containing it in the compartment of origin
- Maintain the integrity of escape routes from a building
- Reduce loss or damage to property from the effect of fire and smoke
- Maintain pressure differential between compartments and ventilation channels

Acoustic Door Seal

Constant noise can be as disruptive as louder sounds. Our Acoustic Door Seal Pack (GIR0400) increases the acoustic performance of Part E compliant doors.

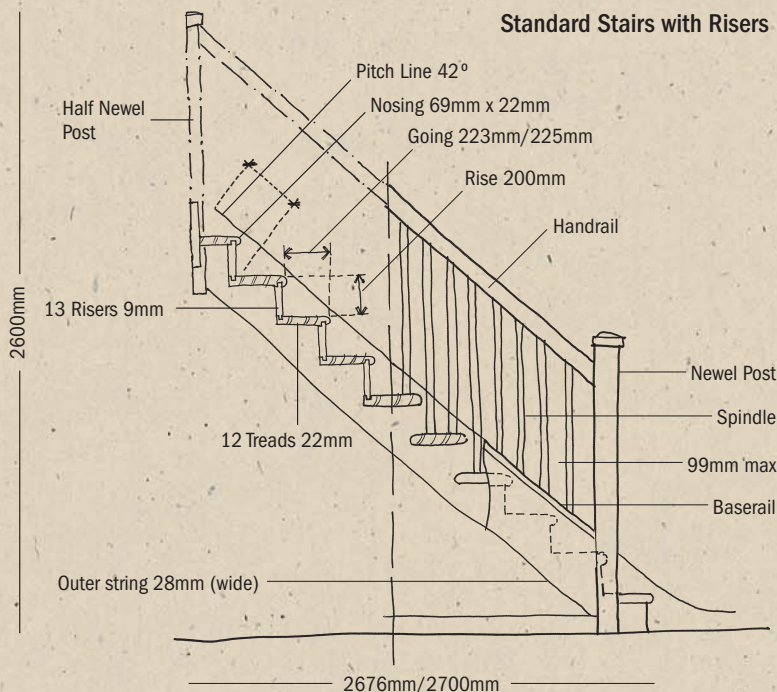

Perimeter seals are fitted to the door frame head and jambs. The perimeter seal fills the gap between the door leaf and frame and in doing so prevents the travel of sound, dust and smoke (BS 476 pt. 31:1) using 'dual air pocket technology'. Door bottom seals are used in conjunction with perimeter seals to prevent sound from travelling in under the door. As the name suggests, this seal is fitted to the bottom of the door and should be used with a threshold plate.

Intumescent strips should be used in fire door applications.

Stair Parts

The staircase can set the tone for a house. It is often the first thing visitors see as they enter – so it is important for it to look right, and to stand up to the rigours of frequent footsteps. Howdens has a range of newel and spindle designs to suit any interior, all crafted in high quality redwood or white oak. Spindles can be painted or stained. Our staircases, in Scandinavian Whitewood with MDF treads and risers, are manufactured to BS 585 1989, and should be fitted following Approved Document K.

Stair Components, Balluster Components and Maximum Spindle Spacing in accordance with Approved Document K

Howdens Flooring

Solid Oak and Solid Bamboo Flooring

For those who demand a high quality, natural product, our Solid Oak flooring is the perfect choice. Manufactured from a B/C Grade timber, it is resistant to stains and comes with a 15 year finish and wear guarantee. Alternatively our Solid Bamboo flooring offers a 25 year structural guarantee and a 5 year finish and wear guarantee.

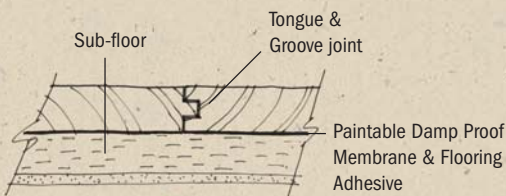

Solid Oak and Solid Bamboo boards can be: secret nailed to timber sub-floors (see diagram below); or glued with suitable adhesive (SDH3180, SDH3181, SDH3182 and SDH3176) to solid, dry, flat screeded or concrete sub-floors. Both are fully restorable and will last for many years.

Not suitable for use with underfloor heating.

Recommended fitting method for timber sub-floors - Secret nail

Recommended fitting method for concrete sub-floors - Glue down

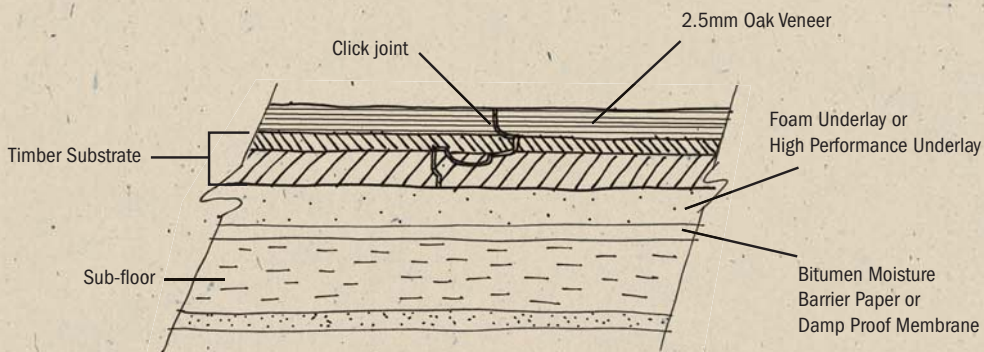

Real Wood Flooring

Real wood (engineered) floors are popular due to their resistance to expansion and contraction from temperature change and moisture and also their adaptability.

Engineered wood is produced using oak veneer layers with each layer oriented in different directions for strength. The top layer can be sanded and re-laquered up to 3 times. Subject to fitting instructions, real wood flooring can be used in conjunction with underfloor heating.

Recommended fitting method for timber or concrete sub-floors - floating

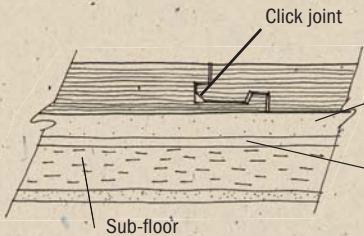

Flooring underlay is essential for use with a floating floor. It provides a cushion for the flooring to sit on, and will provide thermal insulation and reduce the emission and transmission of sound.

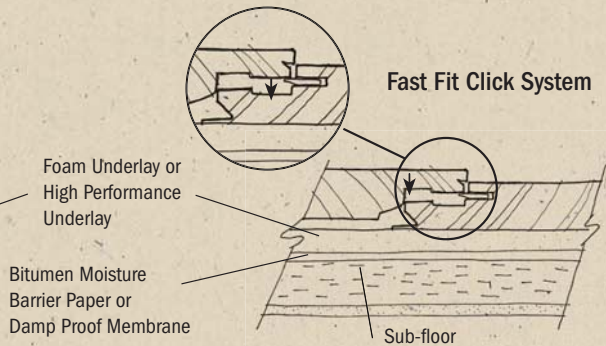

Laminate Flooring

Howdens quality laminate flooring has a tried and tested locking system for fast, secure installation. It features a HDF core and edge sealing which ensures the absolute minimum amount of moisture is absorbed. The quick fit, push down laminate fast fit system increases fit speed by up to 30%. The flooring can be laid one piece at a time rather than row by row. All of our laminate flooring is suitable for use with underfloor heating.

Standard Click System

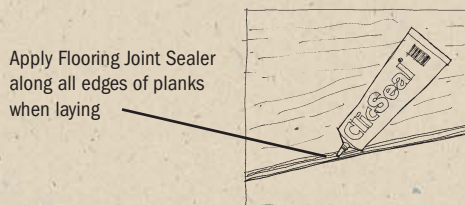

Fast Fit Click System

Aqua Block

On selected ranges, our Aqua Block specification makes the flooring suitable for bathrooms and other areas prone to high moisture levels (excluding wet rooms), if the joints are sealed using Flooring Joint Sealer (SDH0099). Standing water should not be left on any laminate flooring. When cleaning laminate flooring, always ensure where a mop is used that it is well wrung out.

The Right Underlay and Sub-floor Preparation

Flooring underlay is essential for use with a floating floor. It provides a cushion for the flooring to sit on and will provide thermal insulation and reduce the emission and transmission of sound.

Foam Underlay – SDH0900

Popular because it is easy to fit, it also has an excellent thermal insulation. Foam Underlay can be used in conjunction with a Damp Proof Membrane (SDH0910), Paintable Damp Proof Membrane (SDH0931) or Bitumen Moisture Barrier Paper (SDH0932). Sheets must be joined together using Multi-Purpose Tape (SDH0930).

High Performance Underlay (XPS) – SDH0909

This underlay has many benefits including excellent levelling properties, compression strength and impact noise reduction. It is also lightweight and easy to handle. It can be used in conjunction with Damp Proof Membrane (SDH0910), Paintable Damp Proof Membrane (SDH0931) or Bitumen Moisture Barrier Paper (SDH0932).

Bitumen Moisture Barrier Paper – SDH0932

Required when fitting flooring on a timber based sub-floor. Use in conjunction with Bitumen Moisture Barrier Paper Tape (GAR0410).

Damp Proof Membrane – SDH0910

It can be used on stone or concrete sub-floors. Details of where and how to use Damp Proof Membrane can be found in the relevant flooring installation guidelines. Use in conjunction with Multi-Purpose Tape (SDH0930).

Paintable Damp Proof Membrane – SDH0931

Is suitable for use with Howdens floorings on cement based sub-floors. Paintable Damp Proof Membrane is used as a moisture barrier on sub-floors when Damp Proof Membrane (SDH0910) is not suitable.

External Door Frames

Door frames are used to hang external doors. Our range includes a variety of softwood, hardwood and oak veneered options which can be trimmed to the specific size of the door. We also offer a door frame length and 30 or 60 minute fire door frames, pre-grooved for intumescent strips which are included.

All softwood door frames are made from pine, with hardwood door frames made using Meranti timber and oak veneered frames made from a hardwood core with an oak veneer. Softwood door frames are pre-treated to protect against fungal decay and rot.

Flooring & Flooring Accessories

We offer a variety of flooring to suit every style and budget, from solid oak and laminate flooring to natural stone effect laminate tiles.

Our range includes a choice of colours, such as oak, bamboo, American pecan, beech and walnut, as well as different finishes, from timber effect to limestone and slate. Our selection provides products suitable for a wide range of applications throughout the home and in commercial properties.

Howdens also supplies a variety of flooring accessories for a professionally fitted floor, including underlay, damp proof membrane, flooring spacers, colour-matched scotias, pipe roses and floor profiles.

For full detail product specifications on all our flooring and flooring accessories, please refer to The Flooring Collection Brochure or visit www.howdens.com/flooring-collection/

Hardware

An illustrated technical guide

Door furniture, security products and fixings are ranges where it is important to have the widest possible choice, and Howdens has all the options you need to complete your projects.

Everything we supply is designed and manufactured to the highest standards. All our hardware products, where appropriate, meet British Standards, building regulations and insurance requirements for both domestic and commercial applications.

From essentials such as hinges and screws to finishing touches such as door stops and draught excluders, we have fixings for every job. Like all our hardware, they meet the necessary standards and requirements, and the range covers products for both commercial and domestic applications.

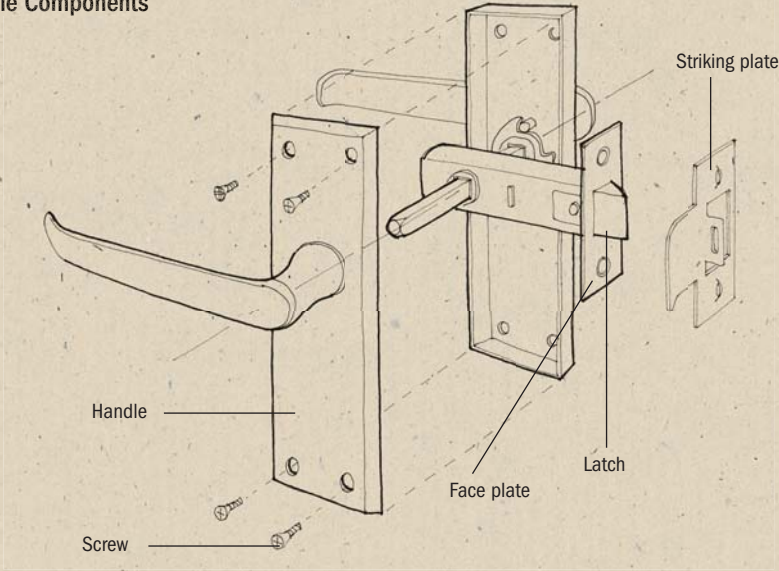

We also supply a complete range of sealants and adhesives, as well as a range of tools and other hardware accessories such as shelving and tubing.

Door Furniture

Carefully chosen door furniture can transform the look of a door – but of course it is essential that one complements the other. That is why we offer products to suit all architectural styles, from historically accurate reproductions to contemporary designs, in a wide choice of materials and finishes: stainless steel, chrome, satin nickel, brass, pewter, aluminium and antique black.

Our range includes levers, mortice knobs, knob sets and pull handles, along with colour matched letter and door plates, escutcheons and cylinder pulls.

Lever Handle Components

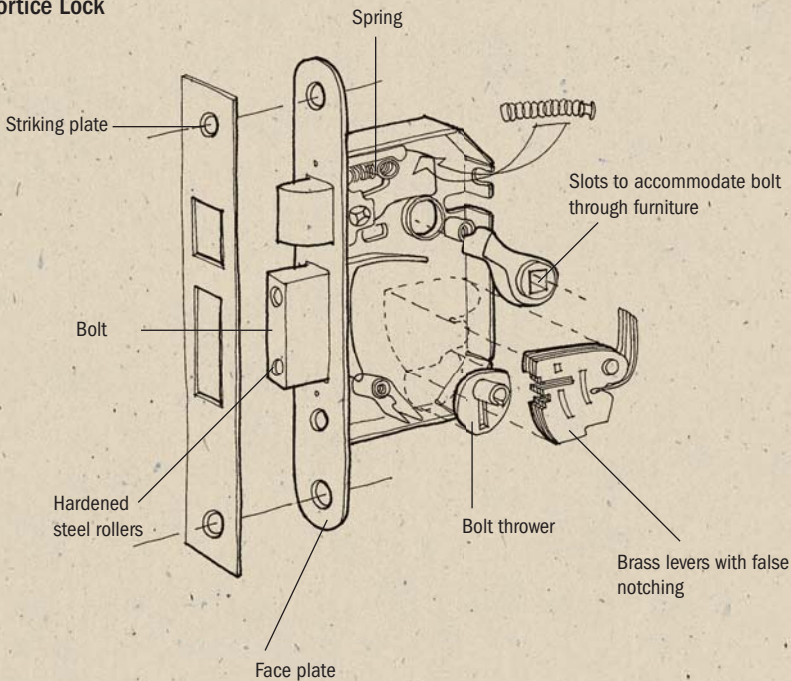

Latch and striking plate supplied separately unless purchasing a latch pack.

Security & Safety

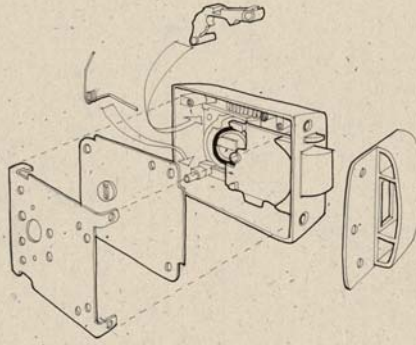

We supply a variety of options for making homes and commercial properties secure. These include a range of locks and deadlocks, nightlatches, security bolts, door chains and viewers, all complying with insurance guidelines and British Standards as necessary. Basically, whatever your insurance company recommends, we can supply the right product.

5 Lever Mortice Lock

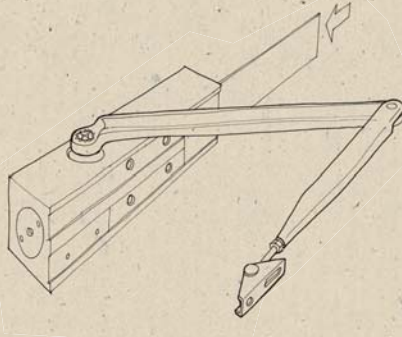

Nightlatches

Are mounted on the surface of the door and provide a simple method of opening external doors.

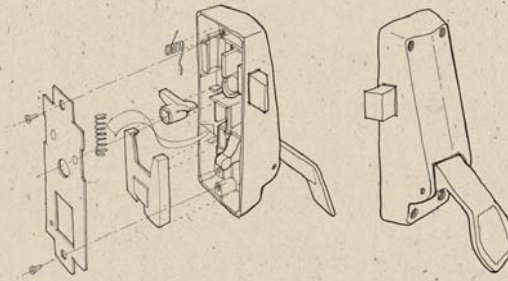

Door Closers

Our door closers include concealed models and options for various fitting methods.

Panic Hardware

Specifically for commercial and public buildings, we offer panic and emergency exit hardware.

Screws

Reisser R2 Woodscrew Features

Reinforced Collar
Reduces the head from shearing

Pozidrive Head
Helps reduce slipping of the driver on insertion

25° Needle Point
Reduces the need to pilot drill in most cases

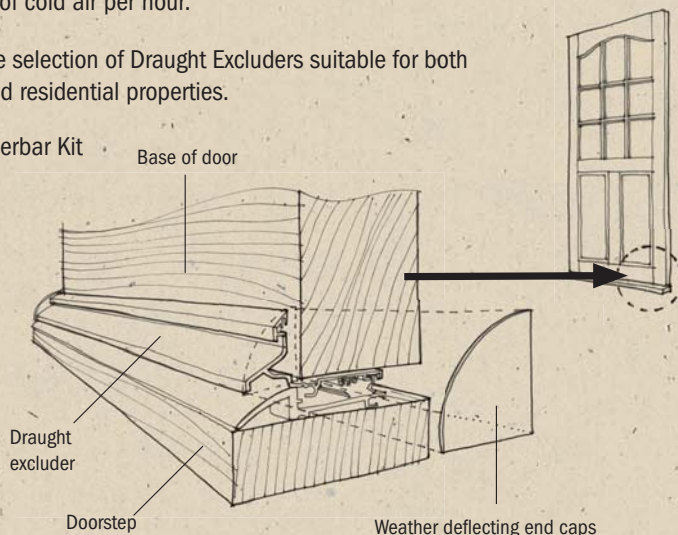

Self-Lubricating
Helps the screw drive in quickly and easily

Draught Excluder

Draught proofing is one of the most inexpensive and effective energy efficiency measures for any size of building - yet it is often overlooked. A 5mm gap, commonly found under a domestic door, can let through 80m³ of cold air per hour.

We offer a wide selection of Draught Excluders suitable for both commercial and residential properties.

Mobility Weatherbar Kit

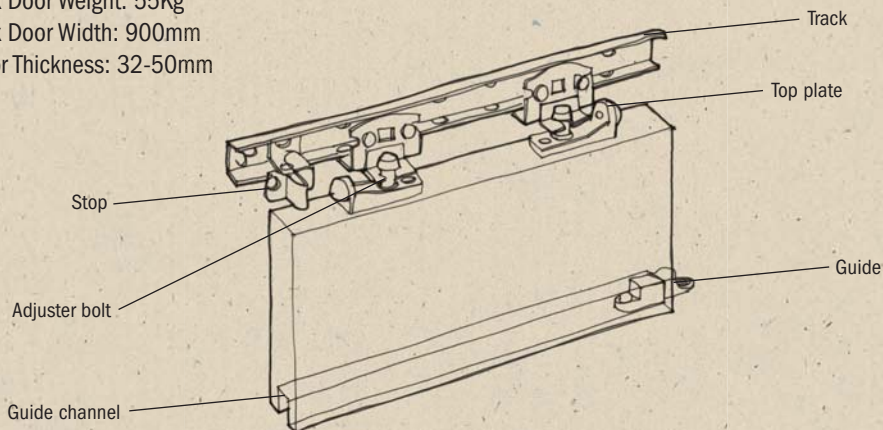

Sliding Door Gear for Joinery Doors

Ideal where space is limited as by using Sliding Door Gear, door swing space is not required.

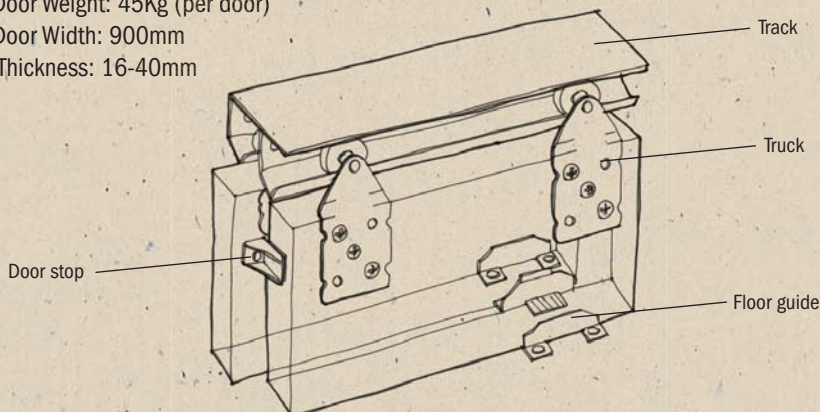

For Single Doors (GIR0030):

- Face fixed to the wall above the door opening, this track accommodates a single door
- Max Door Weight: 55Kg
- Max Door Width: 900mm
- Door Thickness: 32-50mm

For Multiple Doors (GIR3010 and GIR3011):

- Allows for doors to be fitted flush within an opening and can accommodate 2 or more doors
- Max Door Weight: 45Kg (per door)
- Max Door Width: 900mm
- Door Thickness: 16-40mm

Door Handles

Latch Handles

Are for internal use and usually mounted on a backplate. They are used in conjunction with a tubular mortice latch. Suitable for use with doors that are of 35-44mm thickness.

Lock Handles

Have a keyhole cut for use both internally and externally where a lock is required and are used in conjunction with mortice sashlocks. Suitable for use with doors that are of 35-54mm thickness.

Privacy Handles

Are used on bathroom doors and in conjunction with a tubular mortice latch. On the inside of the door there is a thumbturn and on the outside of the door there is a release slot which can be used to unlock the door in an emergency. Suitable for use with doors that are of 35-44mm thickness.

Bathroom Handles

Are used in conjunction with a bathroom mortice sashlock. In order to comply with building regulations, bathroom locks in commercial applications must have the ability to be operated externally in case of emergency. Suitable for use with doors that are of 35-44mm thickness.

Euro/Oval Profile Handles

Are used mainly in commercial settings. They have an enlarged euro or oval profile keyhole shape cut out of the backplate which is used to house a key operated cylinder. They are used in conjunction with a cylinder lock.

Rose Handles

An alternative to a latch handle, rose handles are mounted on a small round or square backplate. Rose handles can be fitted on their own with a tubular mortice latch or with a matching bathroom turn or escutcheon. Suitable for use with doors that are 35-54mm thickness.

Mortice Knob Handles

Mortice knobs are mounted on a round backplate and usually fitted in conjunction with a tubular mortice latch. These can also be paired with a bathroom turn or escutcheon. Suitable for use with doors that are 35-44mm thickness.

Disabled Access Handles

Are used on bathroom doors. On the inside of the door there is a lever and on the outside of the door there is a release slot which can be used to unlock the door in an emergency. Suitable for use with doors that are of 40-54mm thickness.

Door Security

As the door is the most obvious way into a property, it is the first place a thief will try. If a door is not securely locked, a burglar can either kick or lever it open very easily. It is therefore essential that all external doors are protected securely with a high quality 5 lever mortice lock, which is embedded into the door for extra strength.

Howdens supplies a variety of options for making homes and commercial properties secure. These include a range of locks and deadlocks, nightlatches, security bolts, door chains and viewers, all complying with insurance guidelines and British Standards as necessary.

Premium Tubular Mortise Latch

Tubular Mortise Latches

Tubular mortise latches can be used in conjunction with either latch, rose or knob handles.

Commercial Door Furniture

Howdens supplies a range of commercial door furniture suitable for communal buildings, offices and commercial properties. The products available include a variety of handles, fingerplates, door closers, digital door lock, panic hardware and signage.

The Edinburgh and Aluminium Roundbar handles also come with a 10 year operational warranty.

Fire Rated Hardware

All the specialist fire rated hardware we offer has been tested to meet all relevant fire regulations. Please always remember to consult a qualified building inspector for exact fire door accessory requirements.

Door Closers

A legal requirement when fitting any fire door, door closers ensure the door is closed and latched when not in use to prevent fire from spreading. All our door closers come with a 10 year manufacturer's guarantee.

Fire Door Hinges

Essential in ensuring the integrity of the fire door is not compromised during an emergency, all our graded hinges are fire rated. Our wide range of graded hinges suit every application, from heavy commercial to light domestic use. It is recommended a minimum of 3 hinges are used when installing a fire door, with the grade of hinge dictated by the weight of the fire door being fitted. See page 257 for a simple hinge grade calculator.

Fire Rated Door Frames

A comprehensive range of fire rated door frames are available to view on page 137.

Fire Rated Expanding Foam

Quick-setting, fire rated expanding foam expands on application to fill small holes or gaps. Once set, it can provide up to 4 hours fire resistance in linear joints and help to control the spread of fire. GIR0088 Everbuild Hand Held B1 Fire Rated Expanding Foam 750ml can be found on page 139.

Signage

Crucial in directing users to fire exits in the event of an emergency, signage ensures awareness of safety procedures at all times. Find our comprehensive range of commercial signage on pages 222.

Fire Rated Handles

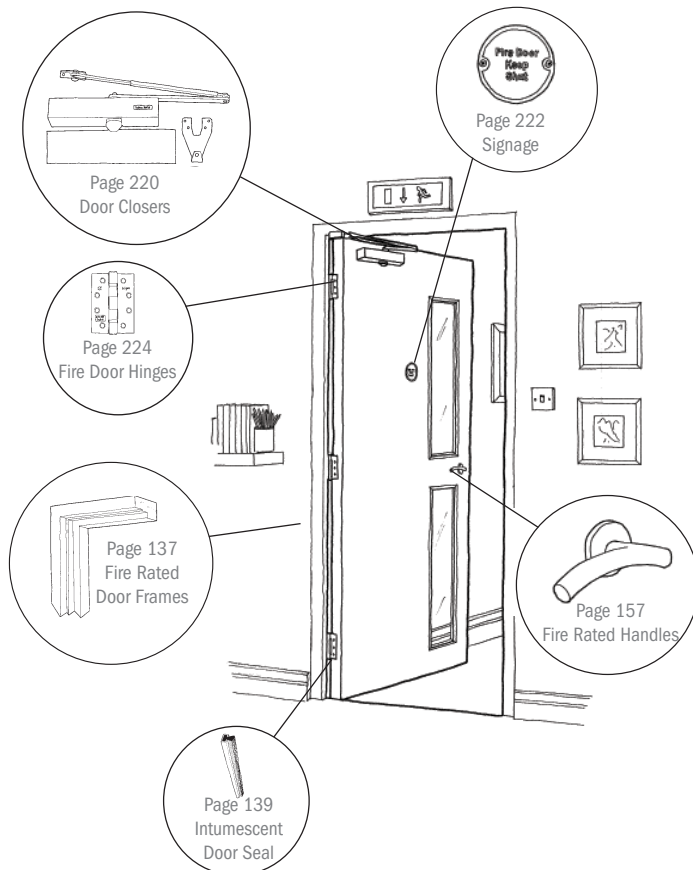

Fire rated handles have a higher melting point to ensure the integrity of the handle is not compromised in the event of a fire. Our selection of fire rated handles are suitable for commercial and residential properties, and all are fire rated for up to 60 minutes and suitable for use with all our fire doors. Find our full range from page 157, including our most popular fire rated handle, DFU0729 Lago Polished Stainless Steel Rose Handle on page 197.

Fire Rated Latches

Help to prevent the spread of fire by ensuring the door remains closed in its frame in the event of a fire. We offer 2½" and 3" Premium Tubular Mortice Latches, both fire rated for up to 60 minutes (See page 208).

Intumescent Door Seals & Hinge Pads

Our intumescent products react to heat in the event of a fire and seal the door to help prevent the spread of smoke. ITS0030 4" Intumescent Hinge Pads can be found on page 139.

Digital Door Lock

Digital door locks offer a convenient method for allowing access to authorised-only users.

Briton Digital Door Lock Satin SCF0241

- Light duty
- Internal Use
- Non-Handed
- 14 digit key pad
- Tubular latch mechanism
- Optional holdback mechanism
- 60mm backset

Briton Digital Door Lock Satin

Panic Hardware

On January 1st 2010, it became mandatory for all exit devices to comply with the latest revisions of EN1125:2008, EN179:2008 and CE Marking.

Briton Double Rebated Panic Set FH FD30/FD60 SCF0076
Suitable for doors up to H2500mm x W1300mm

Briton Single Panic Bolt FH FD30/FD60 SCF0078
Suitable for doors up to H2500mm x W1300mm

Briton Rim Panic Latch FH FD30/FD60 SCF0077
Suitable for doors up to H2500mm x W1300mm

Briton Outside Access Device - Lever FH FD30/FD60 SCF0073

Briton Security Push Pad FH FD30/FD60 SCF0081

EN1125:2008 - Applies to PANIC APPLICATIONS where the exit door is used by the public and provides safe and effective escape through the doorway with minimum effort, and without prior knowledge of operation.

EN179:2008 - Applies to EMERGENCY APPLICATIONS where the exit door is used by people who “are familiar with the emergency exit and its hardware, and therefore a panic situation is unlikely to occur”.

The Kitchen Collection

In addition to doors, joinery and flooring, Howdens Joinery offers over 40 inspirational kitchens plus a full range of accessories, worktops, sinks, taps and a wide variety of Lamona appliances exclusive to Howdens.

Howdens App

Download the free Howdens App to bring a kitchen to life. Hold your smartphone or tablet over the images marked with the  icon and, using the latest picture recognition technology, the App will start to play the associated kitchen movie. When the movie starts to play, double-tap the screen to make it full-size.

For full details please refer to The Kitchen Collection Brochure or visit our website at www.howdens.com.

✓ Finish suitable for door range.

✗ Finish not suitable for door range.

* To be finished on edges only.

All Howdens doors are suitable for paint finishes. Exterior stains are not suitable for internal applications as they do not adequately protect the door against knocks, scratches and dents.

Interior stains and varnishes are not suitable for external applications as they are not flexible enough to cope with the movement of external doors and do not protect against UV light.

Some finishes may cause the grain to raise slightly. A light sand between coats is recommended.

Doors Overview

A comprehensive guide to our full range of internal and external doors.

All external doors conform to the following thicknesses: Standard and FD30 44mm, FD60 54mm.

Hinge Grade Information

Graded hinges have different specifications dependent on the grade that is achieved in testing. It is important to understand the differences in specification when selecting the hinge to ensure it is compatible with the door and other hardware being fitted; ensuring the door does not sag and operates smoothly. Please see the table and other guidance information below to select the correct hinge grade for the door mass:

Grade	Door Mass (kg)
7	40
11	80
13	120

Door closers increase the loading on hinges and the rate at which they wear.

Door closers without a backcheck increase the door mass by 20%^{*1} while door closers with a backcheck increase the door mass by 75%^{*2}.

Hinges should be selected according to the total mass; actual door mass plus the mass added by the door closer.

It is recommended that three hinges are used on timber doors when fitting with a door closer.

^{*1} Add 20% to the mass of the actual door ^{*2} Add 75% to the mass of the actual door
